

DEN-JET HOLD CLEANING NOZZLE

The Hold Cleaning Nozzle is primarily used onboard Bulk & General Carriers for washing down residues in cargo holds of all sizes. It's equally effective for other type of cleaning applications. Due to the high impact of the jet and washing efficiency, prior sweeping is not necessary in order to achieve a clean surface. Hot water can be used for the removal of grease deposits and other stub- born dirt.

The nozzle operates with a combination of water from the fire-line and compressed air. The combined force generates a solid tightly compressed jet of water capable of reaching 35m. The water line is fixed, but the air line is adjustable.

The Hold Cleaning Nozzle is mounted on a tripod and can be assembled easily, keeping the operator above the water. Water and air hoses are supplied separately in 20m length.

TECHNICAL DATA

Range at 7 bars	40 m
Max. water flow	20 m ³ /hour
Recommended air supply pressure	7 kg/cm ² (100psi)
Max. air flow	2.5 m ³ /min (88 cfm)
Water hose size	2"
Air hose size	3/4"
Standard water hose coupling	2" Nakajima coupling
Air hose coupling	Universal claw type
Unit weight exclude hose	23 kg

Equivalent IMPA code: 59 07 42

(Carton size: 125 x 60 x 21cm)
